0.1 *Data + Ida B. Wells-Barnett*

- A *well* is a structure created in the earth by digging, driving, or drilling to access valuable resources; a water well, unlike a cistern, draws from the *foundation* for resources.
- We use “Data Wells” to describe the planning, input, and storage of critical historical data.
- We begin our analysis with Ida B. Wells-Barnett’s development of a lynching database.
- We describe other “Data Wells” on race and U.S. state violence via quantitative history.

...

research lab

1.1 Quantitative history

- Quantitative history considers methods in the quantification of historical information.
- Historians like Pierre Chanu, author of the text to the right, are often centered but highlight more conservative historical narratives¹.
- Despite long-standing critiques, fewer historical narratives focus on the computational and data aspects of critical histories.

1.2 Racialization and U.S. State Violence

- Lynching

. . .

- Police

. . .

- Prisons

1.3 Lynching

- **Personal experience.** In 1892, a friend of Ida B. Wells-Barnett was lynched. Wells-Barnett, a known activist, community organizer, and journalist, would generate then-complex indicators of lynching.

. . .

- **Intuition and method.** Like many other Black communities at the time and her allies, Wells-Barnett acknowledged both the very personal (micro) social forces of lynching and the systemic (macro) nature of white racial violence.

. . .

- **Research impact.** Her development of a series of databases, and the use of number and quantification would have profound impact on the view of state-sponsored white racial violence for centuries.
